DOWNLOAD

American Mathematical Society, United States, 2014. Microfilm. Book Condition: New. 254 x 178 mm. Language: English . Brand New Book. This book is a collection of expository articles based on four lecture series presented during the 2012 Notre Dame Summer School in Topology and Field Theories. The four topics covered in this volume are: Construction of a local conformal field theory associated to a compact Lie group, a level and a Frobenius object in the corresponding fusion category; Field theory interpretation of certain polynomial invariants associated to knots and links; Homotopy theoretic construction of far-reaching generalisations of the topological field theories that Dijkgraaf and Witten associated to finite groups; and a discussion of the action of the orthogonal group $O(n)$ on the full subcategory of an n -category consisting of the fully dualisable objects. The expository style of the articles enables non-experts to understand the basic ideas of this wide range of important topics.
