Transactions of the Clinical Society of the University of Michigan Volume 8

By University of Michigan. Society

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 100 pages. Dimensions: 9.7in. x 7.4in. x 0.2in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1917 Excerpt: . . . data and results, H-- ar, d H--!--H indicate syphilis, stronglv suggestive;-)-suggestive; and J slightly suggestive. Babies, who remained well, remained so up to time of discharge from the Hospital, usually at the sixth week. Subsequent condition could not be followed. It will be seen from the table that although the spirochetes were readily demonstrated in the controls, in no case could they be found in suspected cord or placental tissue on repeated examinations. In two of the cases the fetal liver was found to contain numerous organisms, easily demonstrated. In view of these results it would seem to be futile to attempt to diagnose syphilis by the demonstration of spirochetes in the placenta by the Levaditi method. The examination of the fetal liver in a suspected case, coming to autopsy, offers a much greater chance of success, and should be made use of as a practical...
