Metrology for Fire Experiments in Outdoor Conditions

By Xavier Silvani

Springer-Verlag New York Inc. Paperback. Book Condition:

New. Paperback. 75 pages. Dimensions: 9.2in. x 6.1in. x

0.1in. Natural fires can be considered as scale-dependant, non-

linear processes of mass, momentum and heat transport,

resulting from a turbulent reactive and radiative fluid medium

flowing over a complex medium, the vegetal fuel. In natural

outdoor conditions, the experimental study of natural fires at

real scale needs the development of an original metrology, one

able to capture the large range of time and length scales

involved in its dynamic nature and also able to resist the

thermal, mechanical and chemical aggression of flames on

devices. Robust, accurate and poorly intrusive tools must be

carefully set-up and used for gaining very fluctuating data

over long periods. These signals also need the development of

original post-processing tools that take into account the non-

steady nature of their stochastic components. Metrology for

Fire Experiments in Outdoor Conditions closely analyzes these

features, and also describes measurements techniques, the

thermal insulation of fragile electronic systems, data

acquisition, measurement errors and optimal post-processing

algorithms. This book is intended for practitioners as a

reference guide for optimizing measurements techniques in an

outdoor environment. Advanced-level students and

researchers will also find the book invaluable....
